

St George's College of Technology Eclipse Case Study

I just wanted to say a big thank you to everyone at Micro Librarian Systems.

We recently upgraded from the stuffy old Heritage system to Eclipse2 and I have to say that it has been the best piece of software I have installed in my 4 years as Network Manager at St. George's College of Technology.

The reason why I am saying a big thank you now is because we recently had a major fault with our server and lost everything including Eclipse. I was told during the install that if I ever wanted to move the database all we had to do was install a blank database from the CD-Rom, then overwrite the folder with the old data. Well, this is what we did from our backup tape and everything worked so well that we had the system back up and running in minutes.

I see a lot of software designed for use in schools and this is definitely my favourite. Not only for its simple backup, but for it's ease of use, it's adaptability outside of the

Library use and its online search engine I congratulate you for creating such a wonderful program. Both staff and pupils find it a joy to work with.

We are even finding new features which we never new existed which make our lives even easier. We have been so impressed we have been telling all the schools we know about the software and many have already upgraded from our recommendations.

So, once again thank you and I look forward to working with this product for many years to come.

Jamie Hirst [Network Manager]
